Active Directory Installation Wizard

NetBIOS Domain Name
Specify a NetBIOS name for the new domain.

This is the name that users of earlier versions of Windows will use to identify the new domain. Click Next to accept the name shown, or type a new name.

Domain NetBIOS name: **LAB214**

Active Directory Installation Wizard

Database and Log Folders
Specify the folders to contain the Active Directory database and log files.

For best performance and recoverability, store the database and the log on separate hard disks.

Where do you want to store the Active Directory database?

Database folder:
C:\WINDOWS\NTDS   Browse...

Where do you want to store the Active Directory log?

Log folder:
C:\WINDOWS\NTDS   Browse...

Active Directory Installation Wizard

Shared System Volume
Specify the folder to be shared as the system volume.

The SYSVOL folder stores the server's copy of the domain's public files. The contents of the SYSVOL folder are replicated to all domain controllers in the domain.

The SYSVOL folder must be located on an NTFS volume.

Enter a location for the SYSVOL folder.

Folder location:
C:\WINDOWS\SYSVOL   Browse...

DNS Registration Diagnostics
Verify DNS support, or install DNS on this computer.

Diagnostic Results

The registration diagnostic has been run 1 time.

None of the DNS servers used by this computer responded within the timeout interval.

For more information, including steps to correct this problem, see Help.

Details

The SOA query for _ldap._tcp.dc._msdcs.school.edu to find the primary DNS

○ I have corrected the problem. Perform the DNS diagnostic test again.

● Install and configure the DNS server on this computer, and set this computer to use this DNS server as its preferred DNS server.

○ I will correct the problem later by configuring DNS manually. (Advanced)

Active Directory Installation Wizard

Permissions
Select default permissions for user and group objects.

Some server programs, such as Windows NT Remote Access Service, read information stored on domain controllers.

○ Permissions compatible with pre-Windows 2000 server operating systems
Select this option if you run server programs on pre-Windows 2000 server operating systems or on Windows 2000 or Windows Server 2003 operating systems that are members of pre-Windows 2000 domains.

⚠ Anonymous users can read information on this domain.

● Permissions compatible only with Windows 2000 or Windows Server 2003 operating systems
Select this option if you run server programs only on Windows 2000 or Windows Server 2003 operating systems that are members of Active Directory domains. Only authenticated users can read information on this domain.

Directory Services Restore Mode Administrator Password
This password is used when you start the computer in Directory Services Restore Mode.

Type and confirm the password you want to assign to the Administrator account used when this server is started in Directory Services Restore Mode.

The restore mode Administrator account is different from the domain Administrator account. The passwords for the accounts might be different, so be sure to remember both.

Restore Mode Password: ••••••••

Confirm password: ••••••••

For more information about Directory Services Restore Mode, see Active Directory Help.

Active Directory Installation Wizard

Summary
Review and confirm the options you selected.

You chose to:

Configure this server as the first domain controller in a new forest of domain trees.

The new domain name is school.edu. This is also the name of the new forest.

The NetBIOS name of the domain is SCHOOL

Database folder: C:\WINDOWS\NTDS
Log file folder: C:\WINDOWS\NTDS
SYSVOL folder: C:\WINDOWS\SYSVOL

The DNS service will be installed and configured on this computer. This computer will be configured to use this DNS server as its preferred DNS server.

To change an option, click Back. To begin the operation, click Next.
