50 GEL PETROUPOLIS

INTERVIEW

Mr. Vlachos, the mayor of Petroupolis

The mayor of Petroupolis was born in Lefkada and moved in Petroupolis when he was seven. When he was growing up, life was different. Technology was, obviously, not as advanced and there were a lot more green spaces. He is also a good doctor. He grew up in a family that would talk a lot about politics so when he grew up he started getting involved in politics, something he thinks is worth doing. He believes that being a mayor is an honour and a great responsibility. He also believes that a mayor has to be trusted by the citizens.

So far he has done a lot of things for the city such as making public squares and is planning on making another one. He has also contributed to the protection of the environment with great efforts and with the help of the students of the city. He supports schools and the youth in general and encourages them as well.

The mayor's future works for Petroupoli

The first work of our mayor for the city will be the Petra Theatre, which was a woodland before it was included to our municipality. A second entrance will be formed below the theatre, the mayor will have it enclosed by hollow sections in order to reduce the risks of fatal injuries, as the theatre is built on a mountain. "It will become the best theatre in Petroupolis and we will all be proud of it", our mayor said. The second mayor's work will be the city hall of Petroupolis itself. It's, indeed, a really important work and all the people of the city along with the mayor should do their best to make it a better building for our municipality. The third work is the form of the 7 parks of our city. The mayor only needs a contractor, who will soon be available, to help "retouch" them and make them bigger and better for the locals. Furthermore, many roads will be formed around the city and schools in order to become modern and more convenient for public transport. Moreover, the mayor has already started putting more led lights around our city to make the roads and the parks brighter. Also he is trying and doing his best to put approximately 800 bins in the city, so that it will be more clean with less litter on the roads. Last but not least, one of the most important works will be a high school in Petroupolis, along with several others nursery schools.
